INTRODUCTION

The early history of Herpetology at the Royal Belgian Institute of Natural Sciences in Brussels is at best sketchy. Of pre-1880 curators, only Alphonse PREUDHOMME DE BORRE stands out for which Georges Albert BOULENGER in 1877 named *Laemancus deborrei*. In 1880 BOULENGER was appointed "aide-naturaliste" and one year later identified (and catalogued in the herpetological register) the famous Iguanodons of Bernissart. Because of his worldwide herpetological and Ichthyological interests and the lack of bibliographical and comparative material at Brussels, BOULENGER was obligated to make frequent trips to the British Museum in London and the Musée d'Histoire Naturelle in Paris. In 1882 BOULENGER was named Assistant at the British Museum where he stayed until his retirement in 1920. On his yearly visits to Brussels, he further maintained the collection. In 1914 while examining fossil fish material at the Abbey of Maredsous a young student of 12 by the name of Gaston François DE WITTE was introduced to BOULENGER. Later that year before the imminent beginning of the first world war BOULENGER invited DE WITTE to London to stay with him. DE WITTE worked for several months under the tutelage of G. A. BOULENGER at the British Museum. In 1920 DE WITTE was associated with the Museum of Belgian Congo in Tervuren where he remained until 1937. DE WITTE also actively took over where BOULENGER had left off and further maintained the collection in Brussels. At the end of 1937 he was appointed curator of Herpetology at the Royal Museum of Natural Sciences in Brussels (that became the Royal Institute in 1950). The bulk of the Herpetological collection at Brussels reflect the collecting efforts of DE WITTE. He undertook six separate expeditions to the Belgian Congo, some of which lasted several years, primarily to the National Parks Albert, Upemba and la Garamba. He collected over six million specimens, more than 183000 of which Amphibians and Reptiles that were split between the Royal Belgian Institute and the Museum of the Belgian Congo. DE WITTE retired in 1961 but remained immensely active, publishing up to his death in 1980 (MISONNE, 1980).

Raymond LAURENT finished his dissertation on the osteology of the Ranoidea in 1940. Subsequently he was sponsored by the Institut des Parcs Nationaux du Congo belge until 1953 dedicating himself to the study of african herpetology, initially under the guidance of DE WITTE at the IRSNB then from 1947 onwards at the Royal Museum for Central Africa in Tervuren. During that period he made long field expeditions to Africa with important collections to equal those of DE WITTE. These collections for the most part remain unstudied. He terminated his african career as professor of Zoology at the Université Officielle du Congo et du Ruanda Urundi and in 1960-61 at the Université de l'Etat at Elisabethville.

This type-list contains types and paratypes of recent Amphibians and Reptiles housed at the Royal Belgian Institute for Natural Sciences. Amphibian families are listed alphabetically, with familial and subfamilial allocations following FROST, 1985. The non-ophidian lepidosaurs are arranged phylogenetically as suggested by ESTES *et al.* (1988). Ophidians are also arranged phylogenetically with familial and tribal allocations following WILLIAMS and WALLACH (in press). The reason for choosing this format is because the various proposed phylogentic relationships within Anura have not found universal acceptance in contrast to the phylogenetic arrangements within Squamata and Serpents.

Each taxon name is followed by the author, date and page number in the original type-reference. This format saves space, because each reference cited in the text can be found in the bibliography section.

Taxa names are supplied with synonyms when applicable. The comment section contains information on the whereabouts of the holotype if only paratypes are at Brussels, a list of exchanged paratypes with other Institutions and remarks on the taxonomic status of certain taxa is mentioned where it is deemed necessary. A table of Musuem acronyms as well as a table of abbreviated references follow the type-list. Also included are complete references used throughout the list.

INTRODUCTION

L'herpétologie à l'Institut royal des Sciences naturelles de Belgique semble commencer avec Alphonse PREUDHOMME DE BORRE à qui Georges Albert BOULENGER dédia *Laemancus de Borrei* en 1877.

En 1880, BOULENGER fut nommé au Musée et, un an plus tard, identifia (et catalogua dans le registre de la collection herpétologique) les célèbres Iguanodons de Bernissart. L'insuffisance des collections et de la bibliothèque dont BOULENGER disposait à Bruxelles l'obligeait à se rendre fréquemment au Muséum d'Histoire Naturelle de Paris et au British Museum. Finalement, il quitta son poste de Bruxelles et fut nommé au British Museum, où il resta jusqu'à sa retraite en 1920 (extrait de MISONNE,

1980). Lors de ses visites annuelles, BOULENGER maintint en bon état la collection de Bruxelles.

En 1914, alors que BOULENGER examinait des poissons fossiles à l'Abbaye de Maredsous, on lui présenta un jeune élève de 12 ans nommé Gaston-François DE WITTE. A la veille de la première guerre mondiale, DE WITTE partit à Londres et travailla au British Museum sous la direction de BOULENGER.

En 1920, DE WITTE devint attaché au Musée du Congo Belge. Il reprit le travail de BOULENGER et s'occupa de la collection de Bruxelles. Il quitta le Musée du Congo Belge pour devenir, en 1937, conservateur au Musée Royal d'Histoire Naturelle de Belgique à Bruxelles. Les collections acquises par DE WITTE constituent la plus grosse partie de la collection herpétologique du Musée (devenu l'Institut en 1950). DE WITTE réalisa six expéditions au Congo Belge, surtout dans les parcs nationaux Albert, Upemba et la Garamba.

Six millions de spécimens furent récoltés par DE WITTE. Parmi ceux-ci, on dénombre quelques 183.000 amphibiens et reptiles qui furent partagés entre l'Institut royal et le Musée du Congo Belge. DE WITTE prit sa retraite en 1961, mais resta encore très actif et publia jusqu'à son décès en 1980.

Raymond LAURENT présenta, en mars 1940, sa thèse sur l'ostéologie des Ranoidea africains. Il reçut des fonds de l'Institut des Parcs Nationaux du Congo belge et fit ensuite une carrière complète à la Fondation pour favoriser les Recherches scientifiques en Afrique. Jusqu'en 1953, LAURENT se consacra sans discontinuité à l'herpétologie africaine. Au début, ce fut sous la direction de G.F. DE WITTE à l'I.R.Sc.N.B.; puis, à partir de 1947, au Musée Royal de l'Afrique Centrale, avec de longs séjours en Afrique au cours desquels il constitua des collections d'une importance numérique comparable à celle des collections de DE WITTE (malheureusement, encore non étudiées en grande partie). LAURENT termina sa carrière africaine comme professeur de zoologie à l'Université Officielle du Congo belge et du Ruanda Urundi et, en 1960-61, à l'Université de l'Etat à Elisabethville.

Le présent catalogue contient tous les types et paratypes des Batraciens et Reptiles récents de la collection herpétologique de l'Institut royal de Sciences naturelles de Belgique. Les familles de Batraciens sont présentées, par ordre alphabétique, suivant FROST (1985). Les Lépidosauriens non-ophidiens suivent l'ordre phylogénétique de ESTES *et al.* (1988). Les Serpents sont présentés selon l'ordre systématique de WILLIAMS & WALLACH (sous presse). Cette présentation a été choisie parce que, parmi les hypothèses phylogénétiques existant pour les Anoures, aucune n'est universellement acceptée, alors que, à l'inverse, les hypothèses proposées pour les Squamata et les Serpentes le sont.

Les espèces sont citées avec le nom de l'auteur, l'année de la publication et la page dans la description originale. Ce format permet de gagner beaucoup d'espace dans la liste et de retrouver chaque description puisque toutes les références citées dans le texte se trouvent dans la bibliographie.

Les espèces sont mises en synonymie lorsque le taxon n'est plus valable. Les remarques indiquent la localisation des holotypes lorsque seuls des paratypes sont présents à l'Institut ainsi que la localisation des paratypes échangés avec d'autres Institutions. Le statut et les problèmes taxonomiques sont aussi mentionnés, si nécessaire. La liste des acronymes, la liste complète des abréviations des références bibliographiques et toutes les références citées dans le texte sont reprises à la fin de cette publication.

ANURA

ARTHROLEPTIDAE

ARTHROLEPTINAE

Arthroleptis adolfifrigerici francesi LOVERIDGE, 1953a : 387

PARATYPES: 1.088 (2) (ex duplicates from MCZ 27470-27479 series); *Data*: Forested banks of the Ruo River just below the Ruo Falls on Mlanje Mountain (Nyasaland) = *Terra typica*; 4.IV.1949; A. LOVERIDGE.

COMMENT: Holotype = MCZ 27479.

Cardiglossa gracilis BOULENGER, 1900 : 446

SYNTYPE: 1.717 (ex BM 1900.2.17.82); *Terra typica*: Benito River (French Congo); date & leg. unknown.

COMMENT: This is the type-species of *Cardiglossa*. Other syntypes are BM 1947.2.30.39-43.

ASTYLOSTERNINAE

Arthroleptis troglodytes POYNTON, 1963 : 327

= *Schoutedenella troglodytes* (POYNTON, 1963) - *vide* LAURENT, 1954b : 34.

PARATYPE: 1.715 (ex NMZB/UM 3739 B); *Data* (= Holotype): Western Chimanimani Mountains, South Rhodesia [= Zimbabwe]; XI. 1962; D.G. BROADLEY.

COMMENT: Holotype = NMZB/UM 3730.

Arthroleptis xenodactyloides nyikae LOVERIDGE, 1953a : 383

= *Schoutedenella xenodactyloides nyikae* (LOVERIDGE, 1953) - *vide* LAURENT, 1954b : 34.

PARATYPES: 1.087 (2) (ex duplicate MCZ 27506); *Data* (= Holotype): Foot of first Nchenachena Falls on the Nyika Plateau, Nyasaland; 3.XI.1948; A. LOVERIDGE.

COMMENT: Holotype = MCZ 27480. POYNTON (in: FROST 1985:20) notes that material assigned to this species by POYNTON 1964:213 should be assigned to *Schoutedenella xenochirus*.

Schoutedenella kivuensis DE WITTE, 1941b : 89

= *Schoutedenella schubotzi kivuensis* DE WITTE, 1941 - *vide* LAURENT, 1954b : 37.

PARATYPES: 1.030 - 1.037 (61); *Data*: See DE WITTE 1933:114 for precise locality data.

COMMENT: Syntypes = MRAC 48783-48784. 1.030 = CAS-SU 13012-013; 1.031(2) = FMNH 109327, 109328; 1.034 = FMNH 109329; 1.034 = BM 1960.1.4.55; 1.034 = MCZ 28431; 1.035 = FMNH 75333; 1.032, 1.034, 1.035(4) = skeletons.

BUFONIDAE

Atelopus moreirae massartii COCHRAN, 1948 : 1

HOLOTYPE: 1.061; *Terra typica*: Castanhal Grande near Obidos, Grao Pará, Brazil; II.1922; J. MASSART.

PARATYPES: 1.061 (4); *Data*: = Holotype.

COMMENT: BOKERMANN (1967) doubts the correctness of the type-locality and assumes that the type-series comes from Italiaia. 1.061 (paratype) = FMNH 75330.

Bufo camerunensis PARKER, 1936b : 153

PARATYPE: 1.095 (F) (ex BM 1947.2.21.97); Efulen, Cameroons; 12.XI.1902; leg. unknown.

COMMENT: Holotype = BM 1947.2.21.33.

Bufo funerus upembae SCHMIDT & INGER, 1959 : 17

HOLOTYPE: 1.284 (M); *Terra typica*: Karibwe, Parc National de l'Upemba, Belgian Congo [= Zaire]; 4-6.III.1947; Mission G.F. DE WITTE.

PARATYPES: 1.285-1.392 (369); *Data*: All paratypes are from the Parc National de l'Upemba or immediately adjacent localities. For precise locality data see original type-description.

COMMENT: 1.285 = BM 1968.639; 1.329 = CM 57195 & 63361; 1.384 = NMZB/UM 12686.

Bufo granulosus beebei GALLARDO, 1965 : 114

PARATYPES: 1.719 (2) (ex untagged from AMNH 55775 series); *Data* (= holotype): Churchill-Rooseveldt Hwy, Trinidad, B.W.I.; 5.X.1951; E.H. MC CONKEY.

COMMENT: Holotype = AMNH 55774. CROMBIE (in: FROST 1985:47) suggest that this taxon may be a valid species.

Bufo granulosus merianae GALLARDO, 1965: 112

PARATYPE: 1.720 (ex untagged from AMNH 46530 series); *Data* (= holotype): Head of Falls of Essequibo River, British Guiana; 21.XI.1937; R. SNEDIGAR.

COMMENT: Holotype = AMNH 46531. CROMBIE (in: FROST 1985:47) suggest that this taxon may be a valid species.

Bufo latifrons savannae INGER, 1968 : 30

PARATYPES: 1.729 - 1.781 (149); *Data*: See original type- description; Mission H. DE SAEGER.

COMMENT: Holotype = MRAC 73067 B 795.

Bufo melanopleura SCHMIDT & INGER, 1959 : 23

HOLOTYPE: 1.265 (M); *Terra typica*: Kankunda, Parc National de l'Upemba, Belgian Congo [= Zaire]. Mission G.F. DE WITTE.

PARATYPES: 1.266 - 1.283 (146); *Data*: Parc National de l'Upemba and immediately adjacent localities.

COMMENT: 1.275 = BM 1968.640-641, NMZB/UM 12687; 1.280(3) = AMNH 79875, CM 57194, 63432.

Bufo nasicus WERNER, 1903 : 252

HOLOTYPE (*per implicationem*): 1.015; *Terra typica*: "ohne irgend welche Fundortsangabe" [= without locality data].

COMMENT: The type-specimen was recatalogued subsequent to WERNER's description with locality data "Texas" and collected by Mr. J. VAN DE PUTTE on 10.XII.1923. SMITH & LAURENT (1950:2) subsequently restrict the type-locality to South America (Atlantic drainage).

Nectophrynoidea malcolmi GRANDISON, 1978 : 124

PARATYPES: 1.905 (2) (ex BM 1975.1985 & 1975.2000); *Data* (= Holotype); 6-8 km SE Goba, road to Maslo Balé Province, Ethiopia, 06°59'N-40°01'E, elevation 3200m; 17.IV.1975; M.J. LARGEN, P.A. MORRIS and D.W. YALDEN.

COMMENT: Holotype = BM 1975.1961.

DENDROBATIDAE**Dendrobates tinctorius wittei LAURENT, 1942 : 12**

HOLOTYPE (*per implicationem*): 1.038; *Terra typica*: "Los Mangos", Colombie; 24.XI.1928; G.F. DE WITTE.

HEMISIDAE**Hemisus olivaceus LAURENT, 1963 : 398**

= *Hemisus olivaceum* LAURENT, 1963 - *vide* FROST, 1985 : 110.

PARATYPES: 1.815-1.825 (11); *Data*: All specimens from the Parc National des Virunga; Mission G.F. DE WITTE.

COMMENT: Holotype = MRAC 40061.

Plethodontyla angulifera WERNER, 1903 : 251

= *Mantipus angulifer* (WERNER, 1903) - *vide* NOBLE & PARKER, 1926:9.

HOLOTYPE (*per implicationem*): 1.014; locality, date & leg. unknown.

COMMENT: NOBLE & PARKER (1926:10) have examined the type-specimen and state that owing to its poor condition it was impossible to assign it definitely to any genus. The well-developed clavicle, Y- or T-shaped terminal phalanges together with the pustulous snout suggest that it is a *Mantipus*.
